

The PS8 offers users a one of a kind lead based switching system for the PS8's onboard presets. This feature allows users to select between presets stored on the PS8 without the need of a connected PC or the PSC controller. Following these simple instructions and using a three position toggle switch mounted anywhere in your vehicle you can have this feature at your finger tips.

Ground trigger to Profile 1 lead input-

Applying and holding a chassis ground signal to this input tells the PS8 to change its current preset mode of operation to Preset 2. Releasing the ground signal input will return the PS8 to Preset 1.

Ground trigger to Profile 2 lead input-

Applying and holding a chassis ground signal to this input tells the PS8 to change its current preset mode of operation to Preset 3. Releasing the ground signal input will return the PS8 to Preset 1.
